

EQUIP IT PROFESSIONALS FOR SUCCESS ON THE JOB WITH CRITICAL IT SKILLS

Across your organization, technology professionals are striving to complete critical projects, respond to customer needs and help the company exceed business goals. They balance the needs of their constituents with the need to continually develop their skills and understanding of emerging technologies. But given the realities of IT today, when even an hour's delay can have a serious business impact, the development of those critical skills is often a luxury. Over time this can lead to a serious deficit in IT skills. It can also contribute to an inability to capitalize on new technologies that could potentially provide competitive advantage. For the individual IT professional, a failure to continually enhance skills and knowledge can spell career disaster.

Impact:

Maintain skills in rapidly evolving and ever-changing technical environment

- Achieve competitive advantages and cost savings by ensuring staff are up to speed on new technologies
- Eliminate the need for IT staff to travel offsite for training workshops and seminars
- Balance need for training with the need to complete critical projects on time

Support IT professionals interested in pursuing certifications

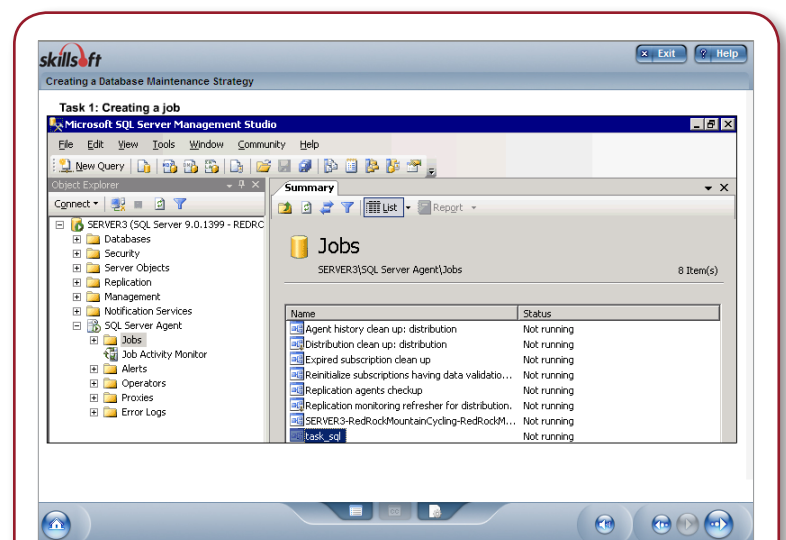

- Support certification pursuit with courses designed to prepare users for certification exams from leading software, hardware, networking, and Web services companies
- Offer professional development and growth opportunities by allowing IT staff to stretch their skill sets into new areas

Improve management of IT projects and rollouts

- Ensure success of critical IT projects by arming project leaders and team members with the skills and techniques for planning, tracking, controlling and maintaining the business projects that drive your organization

Features:

- Flexible purchasing options allow for personalized learning plans
- Over 700 Award winning courses provide breadth and depth across six critical technology subject areas (software development, Internet and networking technologies, operating systems and server technologies, enterprise database systems, web design, and project effectiveness)
- New courses frequently added to keep up with the constantly changing requirements for various professional certifications
- Simulations offer task-based multipath scenarios to provide realistic practice of technology subjects and applications
- Integrated mentoring enables rich interactions with experts through email

The IT Skills library provides a rich array of content assets to support the full range of formal and on-demand learning needs of IT organizations today.

Library Overview

Software Development

Enables developers of all skill levels to create and deliver software products and services for an extensive set of industry tools and development environments for corporate and Internet deployment.

Internet and Network Technologies

Allows administrators, technicians and engineers to engage in the continual process of upgrading their expertise in complex network and Internetwork technologies, which are the foundation of today's IT systems.

Operating Systems and Server Technologies

Provides IT professionals the hands on technical training and just-in-time resource availability required for smooth functioning of operating systems and servers.

Enterprise Database Systems

Assists administrators, analysts and other database professionals in efficiently implementing and managing complex enterprise database systems, ranging from transaction processing to strategic decision making.

Web Design

Features vendor-neutral instruction on design principles, tools and scripting languages, as well as one-of-a-kind robust developer curricula to either create simple Web sites or complex business applications deployed on the Web.

Project Effectiveness

Arms project leaders and team members with the skills and techniques for planning, tracking, controlling and maintaining the business projects that drive your organization.
