

Credentials Verification Organization Services

Whether a hospital, health system, health plan, FQHC, surgery center, or medical group, organizations often need help managing CVO-related functions. HealthStream's NCQA-certified CVO is perfect for organizations looking for initial and recredentialing services, which can be employed in an overflow or full-service capacity, including data collection and application management.

Our CVO services include

- Hospital Credentialing
- Managed Care-Provider Network Credentialing
- Surgery Center & Clinical Services Credentialing
- Expiring Credentials
- Sanctions Monitoring

HealthStream's CVO

- Offers applications to providers via an online application with pre-populated selected provider information
- Collects provider information, conducts data entry, data verification, and disseminates results
- Accommodates workflow volume fluctuations
- Checks primary source verification sites that are reliable, accurate, and meet multiple accreditation standards, returns and stores the results
- Reaches out to non-automated sites with systematic follow-up for successful verifications

healthstream.com/contact

Established in 1998

Earned NCQA certification every year since 2000

- Hosts a 24/7 comprehensive, user-friendly website with anytime access to provider application, data, real-time verification and status update including flags for potential problems
- Sends email alerts to clients when provider applications are received along with updates and reports

Benefits

- Streamlined verification services for common providers in a health system
- Reduction in initial and re-credentialing timeframes through automation
- Data integration from other business applications such as referral services, contracting, and claims processing
